

AMENDMENTS TO THE CLAIMS

The **Listing of Claims** given below replaces, without prejudice, all prior listings of claims in the present application.

Listing of the Claims

1. (Original) An adjustable monitor support comprising:
 - a support structure configured to support a monitor; and
 - a plurality of jack screw assemblies configured to adjustably secure the monitor to the support structure.
2. (Original) The adjustable monitor support of claim 1, wherein each of the plurality of jack screw assemblies includes:
 - a jack stud configured to be fixedly inserted into a hole in the support structure;
 - a jack screw configured to be threaded onto the jack stud; and
 - a nut configured to be threaded onto the jack screw.
3. (Currently amended) The adjustable monitor support of claim 2, wherein the monitor includes a retainer, the retainer having an aperture, the retainer configured to be disposed on the jack screw so that the jack screw assembly passes through the aperture in the retainer.
4. (Original) The adjustable monitor support of claim 3, wherein the nut is configured to be disposed on the jack screw and over the retainer.
5. (Original) The adjustable monitor support of claim 2, wherein the jack screw is configured to be rotated relative to the jack stud, wherein a position of the monitor changes with a change in position of the jack screw.
6. (Original) A gaming terminal comprising:
 - a monitor;
 - a housing; and

a plurality of jack screw assemblies configured to adjustably secure the monitor to the housing.

7. (Original) The gaming terminal of claim 6, wherein each of the plurality of jack screw assemblies includes

- a jack stud configured to be fixedly inserted into an aperture in the housing;
- a jack screw configured to be threaded onto the jack stud; and
- a nut configured to be threaded onto the jack screw.

8. (Original) The gaming terminal of claim 7, wherein the monitor includes at least one retainer having an aperture configured to accommodate the jack screw.

9. (Currently amended) The gaming terminal of claim 7, wherein the jack screw is configured to be rotated until an evaluated position of the monitor matches a predetermined desired position of the monitor.

10. (Currently amended) The gaming terminal of claim 9 27, wherein each of the plurality of jack screw assemblies includes

- a jack stud configured to be fixedly inserted into an aperture in the housing;
- a jack screw configured to be threaded onto the jack stud; and
- a nut configured to be threaded onto the jack screw the jack screw,

wherein the jack screw is configured to be rotated until the a value representing the predetermined position of the monitor matches a distance between a front door of the gaming terminal and the monitor is positioned within a predetermined distance of the front door of the gaming terminal when the front door of the gaming terminal is in a closed position.

11. (Currently amended) The gaming terminal of claim 10, wherein ~~the value representing the predetermined distance position of the monitor~~ is between 2 mm and 5 mm.

12. (Original) The gaming terminal of claim 7, wherein the jack screw has a pitch measuring .5 mm.

13. (Original) The gaming terminal of claim 7, further comprising:
a processor, a printing device, and a currency distributing and collecting device disposed in the housing.
14. (Currently amended) An adjustable monitor support comprising:
a support structure configured to support ~~the~~ a monitor; and
jack screw means for securing the monitor to the structure at at least ~~one~~ two points,
wherein the screw means ~~is~~ are configured to be separately rotatably adjustable at each of the at
least ~~one~~ two points, the screw means further configured to allow the position of the monitor
relative to an aperture in a door to be adjusted so that the gap between the monitor and a door
aperture is less than a predetermined value.
15. (Currently amended) A gaming terminal, comprising:
a monitor;
a housing; and
jack screw means for adjustably securing the monitor to the housing at at least ~~one~~ two
points, wherein the screw means ~~is~~ are configured to be separately, ~~mechanically~~ rotatably
adjustable at each of the at least ~~one~~ two points.
16. (Original) A method for adjusting the position of a monitor, comprising:
supporting a monitor via a support structure; and
adjustably securing the monitor to the support structure via a plurality of jack screw
assemblies.
17. (Original) The method of claim 16, further comprising:
fixedly inserting a jack stud into an aperture in the support structure;
threading a jack screw onto the jack stud; and
threading a nut onto the jack screw.
18. (Original) The method of claim 17, further comprising:

placing a retainer onto the jack screw, wherein the retainer extends from the monitor and includes an aperture configured to accommodate the jack screw.

19. (Original) The method of claim 17, further comprising:

evaluating a position of the monitor relative to a predetermined position of the monitor;
and

rotating at least one jack screw until the evaluated position of the monitor matches the predetermined position of the monitor.

20. (Original) A method for adjusting the position of a gaming terminal monitor comprising:

securing a monitor to a housing of the gaming terminal via at least one jack screw assembly; and

adjusting a position of the monitor via the at least one jack screw assembly.

21. (Original) The method of claim 20, further comprising:

fixedly inserting a jack stud into an aperture in the support structure;
threading a jack screw onto the jack stud; and
threading a nut onto the jack screw.

22. (Original) The method of claim 21, further comprising:

adjusting a position of the monitor after the monitor is secured to the housing by rotating the jack screw relative to the jack stud.

23. (Currently amended) The method of claim 22, further comprising:

evaluating the current position of the monitor relative to a predetermined desired position of the monitor; and

rotating at least one jack screw until the ~~evaluated~~ current position of the monitor matches the predetermined desired position of the monitor.

24. (Currently amended) The method of claim 23, wherein ~~a value representing the~~ predetermined desired position of the monitor is ~~equal to the~~ within a predetermined distance

~~between~~ of a front door of the gaming terminal ~~and the monitor~~, when the front door of the gaming terminal is in a closed position.

25. (Currently amended) The method of claim 24, wherein ~~value representing~~ the predetermined distance ~~position of the monitor~~ is between 2 mm and 5 mm.

26. (Original) The method of claim 21, wherein the jack screw has a pitch measuring .5 mm.

27. (New) The gaming terminal of claim 6, further comprising:
a front door mechanically coupled to the housing, the front door having an aperture through which the monitor is visible when the door is in a closed position.

28. (New) The adjustable monitor support of claim 5, wherein the jack screw is configured to allow the relative position between the monitor and an aperture in a door to be adjusted so that the monitor is within a predetermined desired distance of the aperture in the door.
